

I urge the FCC to reject the NAB's petition 04-160. AS an owner of Sirius Satrad stock for almost 2 years and as a future owner of the product. I would like to be able to have an automatic source of weather intelligence when ever I want it. This feature can be provided by Satallite radio, XM or Sirius. Also this is an added safety feature for any driver, especially professional drivers. I do not believe it should be up to the NAB to determine what I listen to on a service I pay for or anyone else one way or the other. Furthermore the existing commercial weather and traffic reports on public AM/FM radio are infrequent and untimely, being delayed by endless broadcasting manueurs for commercial reasons to hold you as a listener to their station. I think it is a matter of safety and freedom to allow Satallite Radio to broadcast National and Local weather and to give a citizen and veteran the right to listen to what he wants, when he wants to, or needs to, especially the weather.  thankyou, jf
